

AXON offers a broad range of equipment designed to be used with its various control products and systems. From crown block savers to test pumps, to a broad selection of connectors, clamps, and adapters, AXON has the tools to provide you with a quality, fully integrated control system.

AXON's High Pressure Test Units and Recorders are the right tools for testing BOP stacks, xmas trees, chokes, kill lines, and more. These air-operated test units can be configured for skid- or unit-mounting, both of which are portable and self contained.

AXON TR™ regulators feature a highly reliable valve design. In addition, these regulators' "stay put" actuator feature maintains pressure even if remote operation is lost. This proven design covers flow from 1/2" to 1-1/2", with a standard inlet pressure rating of 5,000 PSI.

### FEATURES

- High pressure test units for BOP stacks, choke and kill lines, and mas trees
- Regulators
- Hydraulic choke control panels
- High pressure test hoses
- Crown block savers
