

AXON diverter control systems are proven reliable safety systems, designed for use during drilling operations. Available in custom or standard designs, AXON diverter controls are built to API 64 and 16D specifications.

These systems include dedicated accumulator banks, sized in accordance with diverter control requirements. This system provides auxiliary control for overboard and mud valves, and telescopic joint controls, with safety interlocks and discrete pressure-reducing circuits included as required.

### FEATURES

- Stand-alone pushbutton or touch screen control panels; or integrated into complete well control system
- Auxiliary accumulators assemblies for segregated diverter control power fluid
- Remote controls solutions - hardwired or PLC based
- Electrical designs for hazardous locations
- National Electric Code or ATEX compliant
- Proprietary SPM Valves and TR™ Regulators for reliable control
